***The Wash Tech***

*The Only Brushless Continuous  
Duty Produce Washer on the Market*

When it comes washing your produce, you want to make sure you do it correctly.  
**KS Technologies and Custom Manufacturing are making *The Wash Tech*.**

After the produce leaves the wash area it enters the **fresh water rinse cycle** where an overhead high-volume rain bar flushes away any remaining soil.

The produce is then sprayed with sanitized water during the **sanitation cycle**.

**This wash machine will allow you to wash your produce fast and easy without having to deal with an abrasive contact brush.**

**The Wash Tech** uses spinning nozzles rather than abrasive brushes. Over time brushes will gain a certain amount of debris and have to be sanitized and eventually replaced.

**Below are a few other types of equipment we manufacture**

Boxing Conveyors & Tables

Produce enters the **wash area** by means of a hygienically friendly polypropylene modular belt. The produce then goes through twenty-four overhead spinning nozzles that rain down from the top. Twenty additional spinning nozzles stationed underneath clean the bottom side of the produce while six directional nozzles clean the sides.

The produce can either leave **The Wash Tech** or meet the optional overhead blow dryers. The ten-foot ride takes about fifteen to thirty seconds via the variable frequency drive motor.

**The Wash Tech** is available in 48" & 60" widths. Many options are available from a Waxer to descent or inlet rollers, filtration and pumps.

Sectional Conveyors

Optional Filtration Systems

Hydraulic Tote Dunker

Box Return Conveyors
